

# Workflow

Advanced Workflow tools for Business Process Management

Running a complex trading operation requires controlled processes and smooth communication between front, middle and back office – a powerful workflow tool is essential.

CubeLogic offers a powerful solution that allows effective modelling of complex business processes across multiple teams and multiple trading, middle and back office systems. Workflow provides the communication link vital to a smooth, controlled trading operation.

## Fast Track to Managing Key Data Efficiently

Cube Reference Data Management is a fast track to gaining *better control and understanding of the various contractual data* in the organisation, offering immediate business benefits without the need for expensive, long drawn-out implementation projects. Reference Data Management uses advanced web technology to offer an *ultra-fast, sophisticated web-based user interfaces* to all key data. Users access the data from their desktop through any standard web browser.

The key to Reference Data Manager is to experience immediate business benefit, through technology. There is *no complex set-up and configuration required*. A *standard set of interfaces* allows one-off loads of all the static data from spreadsheets or other systems efficiently so users can quickly begin to realise the *ease of use and control provided*.

CubeLogic Reference Data Management can *define and maintain a complete set of limit structures* to be applied to the portfolio. *Limits can be assigned at various levels* in the hierarchy for individual or groups of counterparties. Exposures are measured and tracked against the limits.

*Counterparty hierarchies can be managed* as well as key KYC information.

BI Reporting allows reference data to be reported quickly and then exported to Word, Excel or PDF as required.

## Cube features include:

- Web-based workflow wizard to create and maintain complex business processes;
- Seamless integration with multiple systems;
- Full suite of custom tasks to provide email notifications, triggers, events and external updates;
- Task escalations;
- Sophisticated workflow inbox to control pending tasks;
- Diary events to manage the suite of contract and reference data for the organisation;
- User roles and teams for task assignment and access control;
- Full audit trail of all actions;
- Highly extensible library of custom actions with programmable interface;
- Seamless integration with all other Cube products;
- Includes a suite of out-of-the-box pre-defined workflows for typical tasks such as counterparty on-boarding, margining, limit approvals and so on.

## Immediate business benefits:

- Increased staff productivity through the safe and structured control of all key static data;
- Report and manage the day-to-day maintenance of agreements including expiry dates and version controls;
- Alerts when contractual clauses can be exercised or contracts are expiring;
- Fully auditable database to support all compliance needs;
- Timely, meaningful and actionable reporting of static data changes.
- Full real-time integration with all Cube applications so changes to limits, hierarchies, and other reference data can be viewed and reported.
